

Estimated Completion of Project craft village

The Craft Village project has begun in India and will be completed within a span of 18 months with phase wise progress.

The Craft Village project:

Phase 1 includes landscaping, water boring, electricity, fencing and security.

Phase 2 includes building of Structures including cottages, art studios, workshops, yoga & meditation centre and an open amphitheatre.

Phase 3 includes installation of equipment, tools and machines for training centre, computers and office needs.

The Impact It Would Bring

1. generate employment and income to diverse communities of craftsmen
2. In stopping Child Labour in India and will dramatically bring impact on Child Education
3. prevent loss of precious skills transferred and gained over thousands of years.

4- environment with low energy consumption, low carbon footprint using natural and organic materials.

5- women empowerment and livelihood.

6- preserve India's historic crafts and heritage.

7- For global tourist handicrafts embody India's history and diversity and they can retain them as memory

Craft Village as a project is so important

The crafts village will be one stop destination, where creativity, innovation and knowledge would work for sustainable development. Crafts and culture are the only differential today that distinguishes country & regions. Crafts & cultural products are consumed by millions of people all over the globe in form of luxury, ultra-luxe, still they face hand to mouth situation and are bound to leave their traditional work.

Modern lifestyle has enabled comfort living yet vast repertoire of knowledge and wisdom that sustained and nurtured these communities are fast disappearing. There is urgent need to preserve and revitalize these crafts and contemporize them. This crafts village aims to build a unique set-up to revive traditional skills and techniques to make a sustainable living.

An estimated 7 million artisans are engaged in craft production to earn a livelihood. According to the United Nations, over the past 30 years, the number of Indian artisans has decreased by 30%, indicating the need to re-invest in artisans to safeguard crafts, culture & heritage as an important source of livelihood.
